Coffee sales review

1 March - 31 May 2024

REVENUE (CURRENCY UNITS)	TRANSACTIONS	AVERAGE (CURRENCY UNITS)
22,834.18	**669**	**34.13**

Three findings

1. Latte contributes the most revenue. It generated 5,265.62 currency units from 137 transactions, or 23.06% of revenue. Latte, Cappuccino and Americano with Milk together contributed 62.42% of revenue and 389 transactions.

2. May was the strongest month. May recorded 9,063.42 currency units and 267 transactions, versus 6,720.56 and 196 in April. Revenue rose 34.86% and transactions rose 36.22%. March recorded 7,050.20 and 206 transactions.

3. Demand peaks at 10:00-10:59. This hour recorded 87 transactions. The next busiest hours, 13:00-13:59 and 19:00-19:59, tied at 62 each. Card payments accounted for 584 transactions (87.29%), and cash for 85 (12.71%).

Two practical actions

Prioritise ingredients for the four most purchased drinks. Check ingredients used by Latte (137 transactions), Americano with Milk (134), Americano (119) and Cappuccino (118) before peak demand. Together they represent 508 transactions, or 75.93% of all sales records. Log actual ingredient use, refills and stockouts before setting purchase quantities. Recipes and usage rates are not supplied.

Trial short refills or maintenance between 08:00 and 09:59. Each hour recorded 12 transactions across the period, versus 87 at 10:00. Confirm opening hours and technician access, finish before the peak, and monitor missed sales. Zero-sales hours alone do not establish an available service window.

Source and limits

The analysis uses the March-May 2024 extract of the supplied **ham_veri.csv** (669 records). All records were retained. The 85 missing card IDs belong to cash sales and remain blank. No exact six-field duplicates or nonpositive amounts were found. Price differences were retained because no price list was provided. Currency is unverified, so amounts use currency units. Transactions are not unique customers. Costs, recipes, opening hours, downtime and stockouts are unavailable. Three months do not establish seasonal demand; monthly totals also reflect different month lengths.
